Summary

Versatile Software Engineer with hands-on expertise spanning full-stack web development, machine learning, and systems programming. Proven track record of building production-grade software—from deep learning computer vision pipelines and predictive machine learning models to scalable full-stack web platforms. Passionate about engineering high-performance systems and solving complex technical challenges.

Education

Bachelor of Computer Applications (BCA)

2023 – Present

St. Berchmans College Autonomous, Changanacherry

Coursework & CS Foundations

- Coursework: Data Structures & Algorithms, Object-Oriented Programming (Java), DBMS, Operating Systems, Computer Networks.
- Actively applying academic computer science theory to open-source software engineering and real-world system design.

Projects

EcoIdentify-AI

PyTorch, EfficientNetV2, FastAPI, React

github.com/Bino369/EcoIdentify-AI

- Built an end-to-end waste classification web application using PyTorch and EfficientNetV2, achieving high multi-class inference accuracy.
- Implemented real-time image preprocessing and inference pipeline with FastAPI backend and responsive React frontend for live webcam classification.
- Evaluated model performance across diverse waste categories with data augmentation to enhance generalization under varied lighting conditions.

Disease-predicts-using-ml

Python, Scikit-learn, Random Forest, SVM, Tkinter

github.com/Bino369/Disease-predicts-using-ml

- Developed a multi-model diagnostic prediction system analyzing symptom profiles using Decision Tree, Random Forest, and SVM algorithms to maximize classification accuracy.
- Engineered automated data preprocessing and feature scaling pipelines with scikit-learn, handling high-dimensional symptom datasets and multi-class target encoding.
- Built an interactive Tkinter desktop GUI for instant condition diagnosis, confidence metrics, and targeted treatment recommendations.

BCA Attendance Tracker

TypeScript, React, Vite, Node.js, Express, MongoDB

github.com/Bino369/bca-attendance-tracker

- Built a full-stack attendance management platform with TypeScript React (Vite) and Node/Express, streamlining daily record keeping for faculty.
- Designed RESTful API endpoints with MongoDB/Mongoose for student analytics, attendance percentage calculation, and automated CSV export generation.
- Implemented responsive state-driven dashboards with robust input validation and error handling for faculty user workflows.

Certifications

Skill Advancement cum Project Mentorship Program

May 2026

Indian Institute of Information Technology (IIIT) Kottayam

Certificate ID: IIITK/SAPM-SBC/2026/ECERT/068

- Completed intensive machine learning mentorship under Dr. Sivaiah Bellamkonda, focusing on computer vision and practical ML deployments.
- Awarded certificate of completion certified by Dr. Radhakrishnan M, Registrar, IIIT Kottayam.

Skills

- **Programming Languages:** C++ (C++20), Python, TypeScript, JavaScript, Core Java, HTML5, CSS3, SQL
- **Frameworks & Web:** React, Vite, Node.js, Express, FastAPI, Qt6, RESTful APIs, WebRTC
- **Machine Learning & CV:** PyTorch, Scikit-learn, Computer Vision, EfficientNetV2, CNNs, OpenCV, Pandas
- **Tools & Platforms:** Git, GitHub, MongoDB (Mongoose), Linux, CMake, VS Code, Postman
- **Communication Languages:** English, Malayalam, Tamil
